Health is something we tend to ignore when we have it. When our body is doing well, we are hardly aware of it. But illness can come even when we are young. In fact, childhood has been a very susceptible time. ...**(1)**.... diseases attack children in particular, and people know very little how to cure them once they struck. The result was that many children died. About a century ago, **(2)**.., scientists found out about germs, and then everything changed. The ...**(3)**.. of many diseases was found, and cures.....**(4)**.... were developed. As this medical discovery spreads, the world became much safer for children. The result is that whereas hundred years ago, the average man lived for 35 years, nowadays, in many areas of the world, people can expect to live for 75 years. And what do we expect by the year 2020? Undoubtedly, medical science will continue to ... **(5)** ... Some people will be able to avoid medical problems that are unavoidable today.

Read the following passage and mark the letter A, B, C, or D on your answer sheet to indicate the correct answer to each of the questions from 23 to 29.

An air pollutant is defined as a compound added directly or indirectly by humans to the atmosphere in such quantities as to affect humans, animals, vegetation, or materials adversely. Air pollution requires a very flexible definition that permits continuous changes. When the first air pollution laws were established in England in the fourteenth century, air pollutants were limited to compounds that could be seen or smelled- a far cry from the extensive list of harmful substances known today. As technology has developed and knowledge of health aspects of various chemicals has increased, the list of air pollutants has lengthened. In the future, even water vapor might be considered an air pollutant under certain conditions.

Many of more important air pollutants, such as sulfur oxides, carbon monoxides and nitrogen oxides are found in nature. As the Earth developed, the concentration of these pollutants was altered by various chemical reactions; they became components in biogeochemical cycles. **These** serve as an air purification scheme by allowing the compounds to move from the air to the water or soil. On a global basis, nature's output of these compounds dwarfs that resulting from human activities.

However, human production usually occurs in a **localized** area, such as a city. In such region, human output may be dominant and may temporarily overload the natural purification scheme of the cycles. The result is a concentration of noxious chemicals in the air. The concentrations at which the adverse effects appear will be greater than the concentrations that the pollutants would have in the absence of human activities. The actual concentration need not be large for a substance to be a pollutant; in fact, the numerical value tells us little until we know how much of an increase this represents over the concentration that would occur naturally in the area. For example, sulfur dioxide has **detectable** health effects at 0.08 parts per million (ppm), which is about 400 times its natural level. Carbon monoxide, however has a natural level of 0.1 ppm and is not usually a pollutant until its level reaches about 15 ppm.

Question23: What does the passage mainly discuss?

- A. How much harm air pollutants can cause.
- B. The effects of compound added to the atmosphere.
- C. What constitutes an air pollutant.
- D. The economic impact of air pollution.

Question24: According to the passage, human-generated air pollution in localized regions....

- A. can be dwarfed by nature's output of pollutants.
- B. will damage area outside of the localized regions.
- C. will react harmfully with natural pollutants.
- D. can overwhelm the natural system removing pollutants.

Question25: The word **detectable** in paragraph 3 is closest in meaning to

- A. special
- B. beneficial
- C. measurable
- D. separable

Question26: The word **these** in paragraph 2 refers to

- A. the various chemical reactions.
- B. the compound moved to the water or soil.
- C. the pollutants from the developing Earth.
- D. the components in biogeochemical cycles.

Question27: The word **localized** in paragraph 3 is closest meaning to

- A. surrounded
- B. circled
- C. encircled
- D. specified

Question28: Which of the following is NOT true according to the passage?

- A. Water vapour might be considered an air pollutant under certain conditions in the future.
- B. Air pollution laws were first established in England in the fourteenth century.
- C. Human activities have been ineffective in reducing air pollution.
- D. When the level of carbon monoxide reaches about 15ppm, it is considered a pollutant.

Question29: Which of the following can be inferred from the first paragraph?

- A. water vapour is an air pollutant in localized areas.
- B. a substance becomes an air pollutant only in cities.
- C. most pollutants today can be seen or smelled.
- D. the definition of air pollution will continue to change.

the correct answer to each of the questions from 30 to 34.

Education is another area of social life in which information technology is changing the way we communicate. Today's college students may not simply sit in a lecture or a library to learn about their field. Through their computers and the wonders of virtual reality they can **participate in** lifelike simulated experiences. Consider the following scenario of the future of education made possible through developments in information technology.

For children over the age of 10, daily attendance at schools is not compulsory. Some of the older children attend school only once or twice a weekly to get tutorial support or instruction from a teacher. For the most part, pupils are encouraged to work online from home. Students should complete a minimum number of study hour per year; however, **they** may make up these hours by studying at home at times that suit their family schedule. They can log on early or late in the day and even join live classes in other countries. In order to ensure that each student is learning adequately, computer software will automatically monitor the number hours a week each student studies on line as well as that student's learning materials and assessment activities. Reports will be available for parents and teachers. The software can then identify the best learning activities and conditions for each individual student and generate similar activities. It can also identify areas of weak achievement and produce special programs adjusted to the students' needs.

Question30: What is the passage mainly about?

- A. Students can know about their weak aspects to focus.
- B. Students don't have to go to school any more
- C. Computer software will make sure students learn at home
- D. The effect of information technology on education.

Question31: What is **NOT MENTIONED** as a benefit of information technology to the students?

- A. Students can stay at home to learn.
- B. Students can learn at times that suit their schedule.
- C. Students' weak achievement can be identified.
- D. Students' learning time won't be monitored.

Question32: According to the passage the software can't

- A. design materials for the students.
- B. monitor the time the students learn.
- C. find out the best activities for the students.
- D. identify weaknesses of the students.
